

# HEAD STOCK & TAIL STOCK

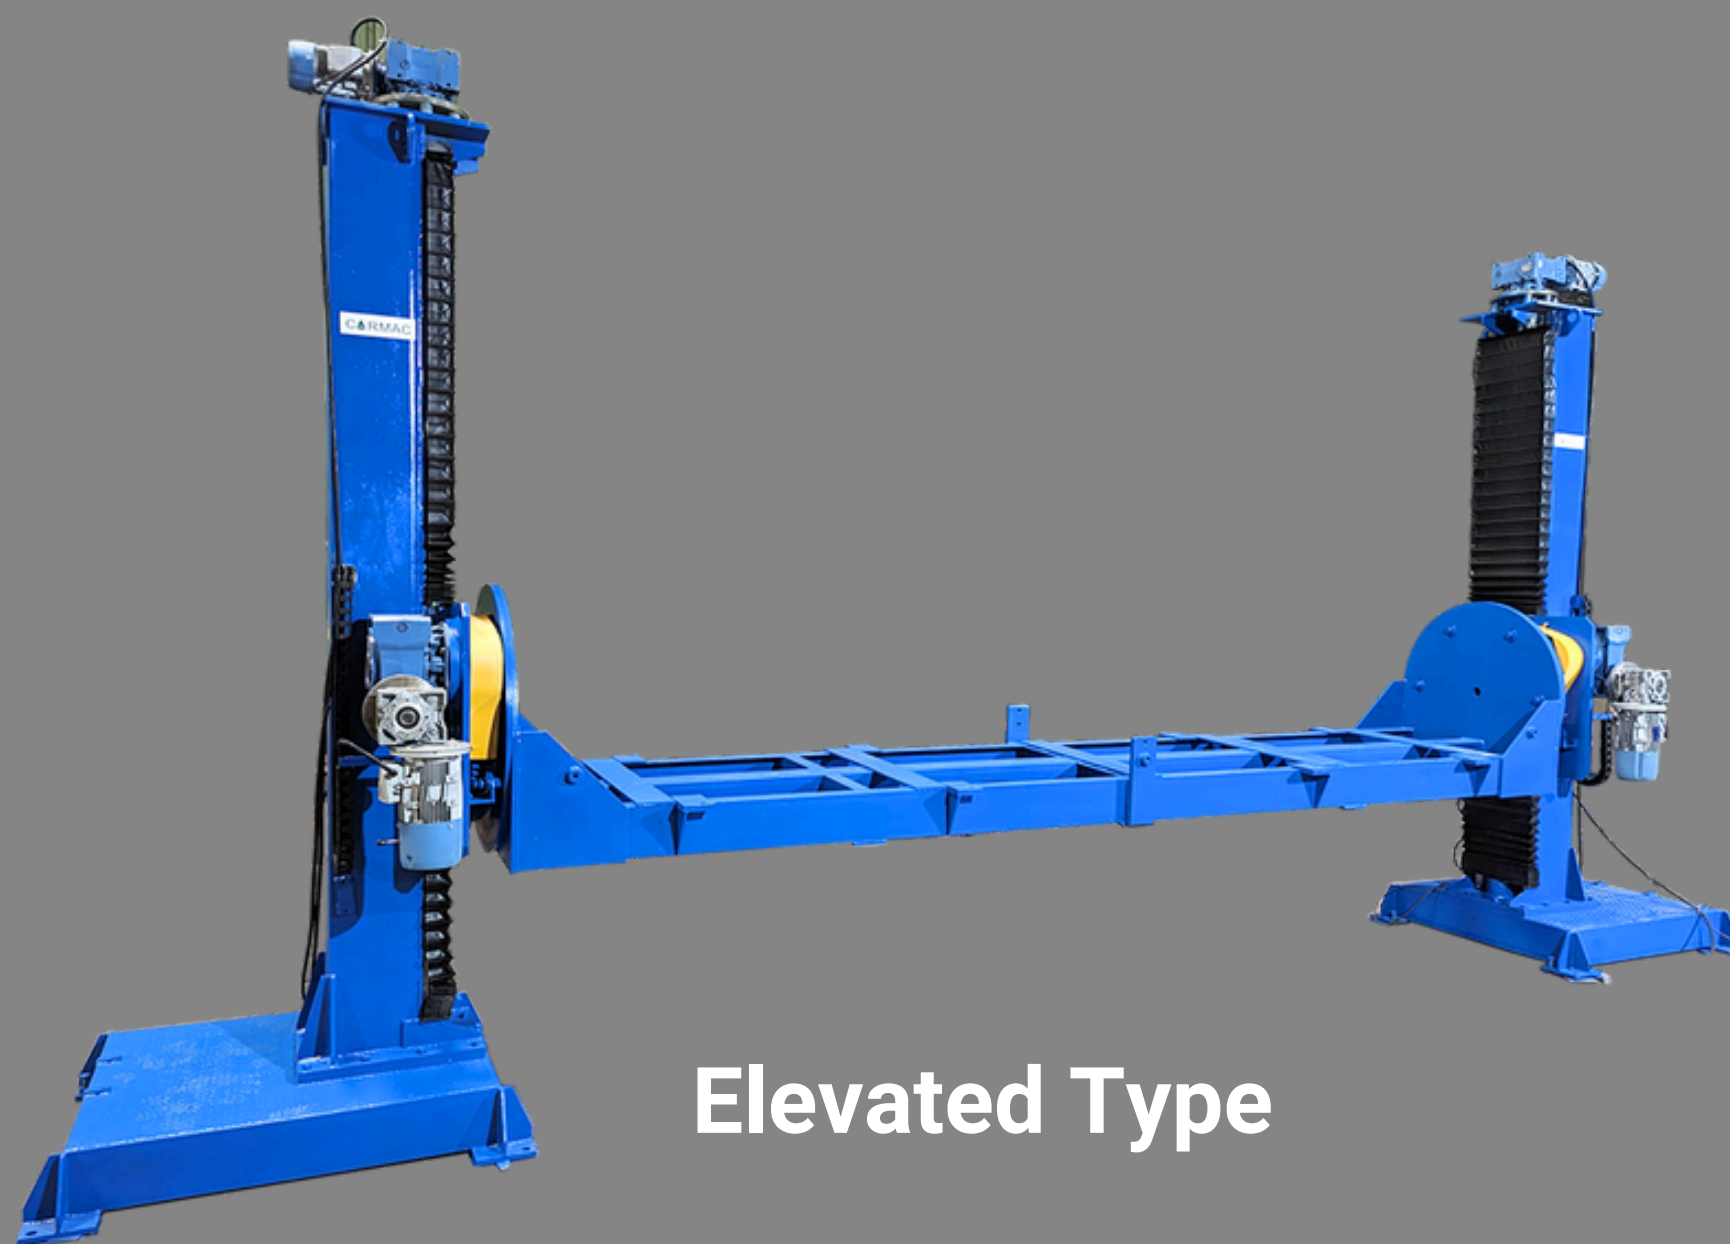

## ABOUT

CARMAC TECHNOLOGIES PVT. LTD. designs and manufactures Head and Tail Stock Welding Manipulators which are an essential tool for many industries. Our manipulators can help to improve safety, increase productivity, and improve weld quality. HEAD STOCK : The head stock is a fixed or adjustable support that holds one end of the weldment.

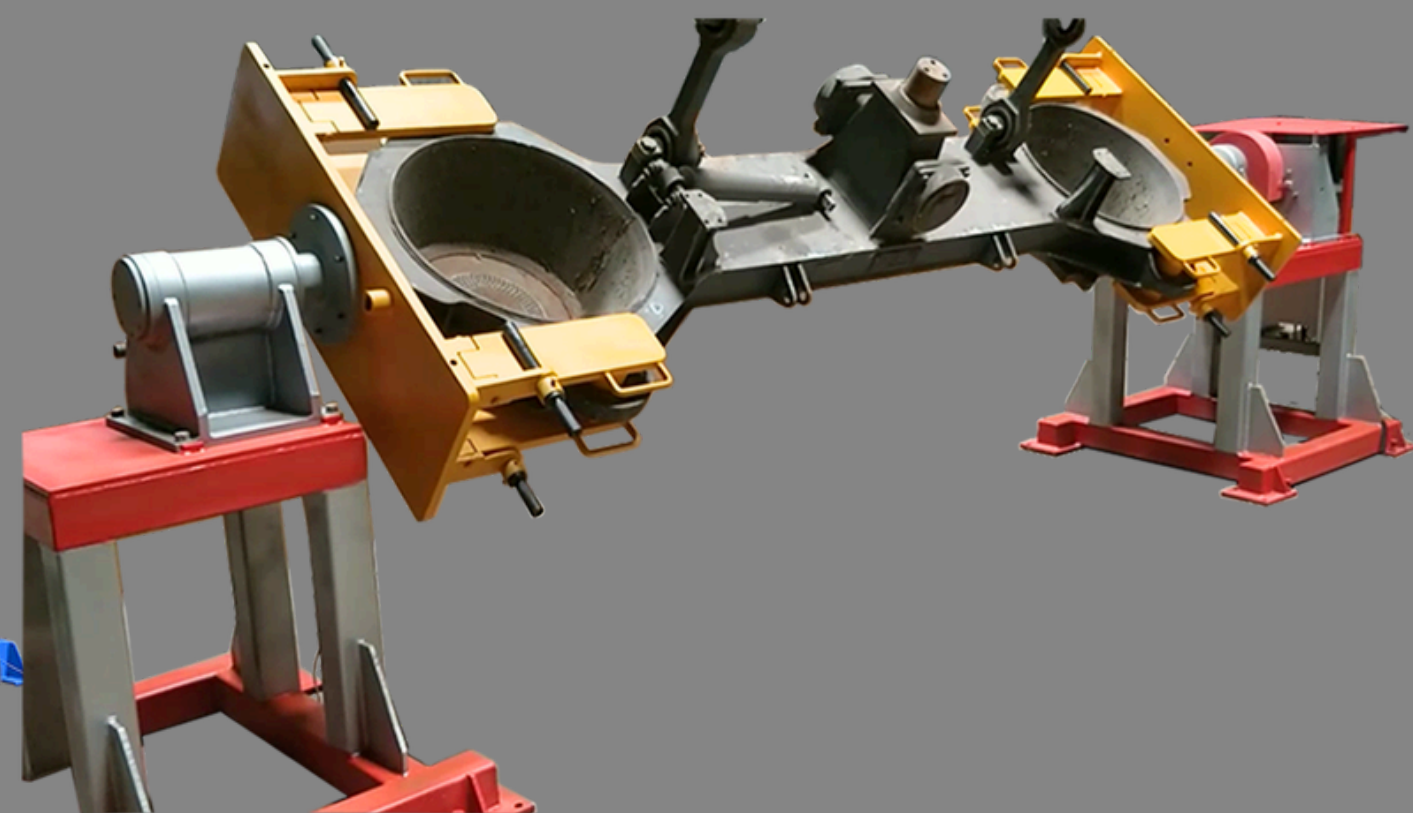

TAIL STOCK : The tail stock is a movable support that holds the other end of the weldment. Both the head stock and tail stock can rotate the weldment in multiple axes, allowing the welder to access all areas of the weldment without having to reposition it manually.

## FEATURES

- Improves safety, productivity, & weld quality.
- Enables easy positioning and rotation of long or heavy components.
- Suitable for painting, assembly, and other precision tasks.
- Compatible with welding fixtures for enhanced stability and accuracy.

Elevated Type

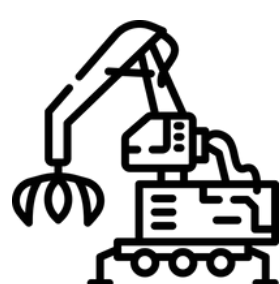

Customized - Fixed Type
